

The IronRidge Ballasted Roof Mount System requires the use of 4"x8"x16" solid concrete blocks weighing ~35lbs (whole) or standard 2"x8"x16" solid concrete blocks weighing ~13.5lbs (half). To order these blocks please contact one of the below suppliers. **Ballast Specifications: freeze/thaw resistant and have compressive yield strength of 3000 psi or greater OR comply with ASTM Designation C1491.** *Important: Ballast block may be purchased from other suppliers but must meet the above specifications. Actual concrete block weights vary by location due to indigenous aggregates. It is the sole responsibility of the installer to verify weight of blocks provided and installed. If you choose to use a Ballast Block with a compressive yield strength lower than 3000psi then we recommend you periodically inspect the Ballast Blocks to ensure the condition has not degraded and remains whole.*
