

# DOMESTIC CONTENT TRACEABILITY

## TECHBULLETIN

*Photographs are often requested by auditors, program administrators, or financing partners as supporting evidence. They act as low-cost, high-value proof to back up written records. IronRidge is pleased to provide this photographic supplement of our domestic content products for your use.*

### DOMESTIC TRACEABILITY

Commercial Project Owners, Third Party Owned (TPO) lease and PPA providers, and other business entities seeking to capture the additional 10% Domestic Content Bonus Credit may be required to justify their purchases through audit. An auditor may ask for documentation related to the veracity of domestic content through a variety of mechanisms. Having ways to achieve compliance is vital. Paperwork, product marking, and manufacturer diligence are important to achieving and maintaining compliance.

Additionally, Distributors will need means to visualize, separate, and account for domestic product within their warehouses. Responsive and reasoned suppliers are relied upon to provide easy to follow part number designations and clearly marked packaging. Contractors will also need to be assured that the product given to them by the distribution partner matches the US part number they are to place on the project.

These products need to be clearly marked on every manufactured unit so that any potential field audits of products by Commercial Project Owners, TPO providers, or the Internal Revenue Service can be easily addressed using physical evidence on the installed product itself. This document serves to orient consumers to IronRidge's products to the means and methods employed by IronRidge to provide traceability to all parties.

### DOMESTIC IDENTIFIERS

Rails will be packed so that sub-bundles (4 rails) are shrink-wrapped in orange cellophane, visible through the clear stretch wrap of the bundle (80 or 160 rails). Domestically-produced rails will have a US encircled logo on their labels.

Non-rail products, like our domestically-produced structural fasteners, will have orange product labels on their boxes and gaylords. For domestically-extruded IronRidge XR10, XR100, and A1 Aire rails, the dies used to extrude these rail profiles have been modified to clearly mark the product to identify it as domestically-produced the product as domestic content. Additionally, each domestic extruder that IronRidge uses has their own die to enable further down-stream traceability.

You'll find US embossed on certain IronRidge products and product components. Others may use an etched or protruding line or other form of demarcation. The locations of these identifying marks can be found on the Technical Data Sheets, Cut Sheets and/or product assets available for each product.

For additional information on Domestic Content and related materials, send an email to [marketing@ironridge.com](mailto:marketing@ironridge.com).

## PRODUCT SKU NOMENCLATURE

IronRidge Domestic Content products will have a “-US” suffix and “US Production” will be specified in the product description. A list of some of our domestic content part numbers are shown below:

| Rails                | Part Number         | Description                                                     |
|----------------------|---------------------|-----------------------------------------------------------------|
| XR10                 | XR-10-168M-US       | XR10, Rail 168” (14 Feet) Mill, US Production                   |
| XR10                 | XR-10-168B-US       | XR10, Rail 168” (14 Feet) Black, US Production                  |
| XR100                | XR-100-168M-US      | XR100, Rail 168” (14 Feet) Mill, US Production                  |
| XR100                | XR-100-168B-US      | XR100, Rail 168” (14 Feet) Black, US Production                 |
| Structural Fasteners | Part Number         | Description                                                     |
| Mid Clamp            | XR-MID-01-B1-US     | XR Mid Clamp (30-40mm), Black, US Production                    |
| End Clamp            | UFO-END-01-B1-US    | End Fastening Object (End Clamp, 30-40mm), Black, US Production |
| Splice               | XR10-BOSS-01-M1-US  | Bonded Splice, XR10, US Production                              |
| Splice               | XR100-BOSS-01-M1-US | Bonded Splice, XR100, US Production                             |
| MLPE Hardware        | BHW-MI-01-A1-US     | Microinverter Bonding Hardware, T-Bolt, US Production           |

Our BX Ballasted System is made exclusively in California and other domestic locations. Because of this, and to provide continuity of verification for previously-shipped BX solutions, BX part numbers do not have a “-US” suffix..

We will be offering more domestic products in the future. Please contact your IronRidge Representative for more details.

## DISCLAIMER

This document lists the available domestically manufactured components produced by IronRidge that installers may consider sourcing for third party-owned projects for which the project owner - who is usually the taxpayer seeking to take the Domestic Content Bonus Credit - seeks to qualify for the IRA Domestic Content Bonus ITC using the First Updated Elective Safe Harbor Table of IRS Notice 2025-08.

Keep in mind that the specific products in the list below that may be incorporated into a project will be determined by a combination of installation site requirements, compatibility of certain products with other products used on the project, and taxpayer preference. Only some - or none - of the products listed below may be appropriate for a given project; and depending upon taxpayer preference, some of the products listed below may not be relevant to the taxpayer’s tax credit strategy, even if they meet installation site requirements. Please consult with the taxpayer in advance to ensure that the products you select meet with taxpayer preference.
